## SIGNATURE SERVER

The primesign SIGNATURE SERVER – your leading signature infrastructure.

For quite some time, there has been a lack of user-friendliness in electronic signature solutions. The primesign SIGNATURE SERVER, a comprehensive electronic signature solution for the application of legally binding signatures, has raised the bar by being user-friendly and easy to integrate with existing processes and applications. Paired with our remote signing service primesign MOBILE, electronic signatures can be applied to documents quickly and easily, and are legally binding.

PUBLIC

### CENTRAL HUB FOR SIGNATURE PROCESSES

The primesign SIGNATURE SERVER serves as a central hub for signature processes in companies. In addition to our qualified signing certificates (primesign MOBILE certificates), existing smart cards and national eIDs (e.g., Austrian mobile phone signature/ID Austria, with primesign WRAPTOR even without prior registration with primesign) can be used to sign documents. The primesign SIGNATURE SERVER also supports server-side created signatures and comes optionally with a built-in hardware security module (HSM) to protect your signing keys for mass processes.

### SIGNING FLOWS FOR CORPORATIONS

Lengthy paper flows can be reduced either through the built-in signing flow feature of the primesign SIGNATURE SERVER or by integrating primesign signatures in existing DMS or workflow systems.

### COMPANY SEALS & OFFICIAL SIGNATURES

The primesign SIGNATURE SERVER supports the application of electronic seals (company signature or electronic company stamp) as well as the creation of so-called official signatures as used in e-government applications according to the Austrian E-Government Act.

### MASS PROCESSES

The primesign SIGNATURE SERVER can also be used as a central signature server that efficiently and automatically signs large volumes of documents electronically (usually connected to other mass systems via an integration interface).

digital signing, simple as that.

# primesign

## SIGNATURE SERVER

The primesign SIGNATURE SERVER – your leading signature infrastructure.

The use cases for electronic signatures in organizations and companies are broad and manifold. However, the use and integration of electronic signatures in processes and applications have so far been associated with considerable challenges. With the primesign SIGNATURE SERVER, paired with our remote signing service primesign MOBILE, electronic signatures are integrated smoothly and efficiently into processes and applications. This allows digitization projects to be implemented consistently, comprehensively, and in a legally secure manner.

### OUR SOLUTION

The primesign SIGNATURE SERVER is an all-inclusive eIDAS-compliant signature solution supporting eIDAS-compliant qualified signatures and seals as well as various electronic signature creation devices. As a web application, our signature solution can be integrated quickly and easily into existing workflows. In addition, signature methods such as Instant Signing and One-Time Signing make the primesign SIGNATURE SERVER a powerful key element for unbeatable flexibility, integrability, and user-friendliness.

### BENEFITS

- ☞ Client-free signing of PDF documents (web interface)
- ☞ Can be optimally used in conjunction with our primesign MOBILE certificates and trust center services
- ☞ Supports various electronic signature creation devices such as signature cards, eIDs, or remote signing services (such as primesign MOBILE or the Austrian mobile phone signature/ID Austria)
- ☞ Creation of qualified personal signatures or qualified seals
- ☞ Guaranteed long-term verifiability (PAdES and LTV-compliant)
- ☞ Implementation of signing flows, also with multiple parties (internal/external) & creation and use of templates
- ☞ Minimal UI for optimal integration in applications (SOAP integration interface)

- ☞ primesign WRAPTOR: Use selected eIDAS eIDs to create a qualified signature with a primesign MOBILE one-time certificate
- ☞ Unified Trust & primesign WRAPTOR: Highest legal significance, uniform signatures, and one responsible trust partner, no matter what you sign with
- ☞ Batch signature capability (e.g. with primesign MOBILE or primesign WRAPTOR): Sign a batch of PDF documents at once, also with selected eIDAS identities (e.g. Austrian mobile phone signature/ID Austria)
- ☞ On-Premise or as a Managed Service
- ☞ Visible signatures (customizable, manual or automatic placement)
- ☞ Placement of signature signets using placeholders (already during document creation)
- ☞ Editing tools for PDF documents and conversion of selected Office formats to PDF (PDF/A optional)

### eIDAS QUALIFIED SIGNATURES AND SEALS

The primesign SIGNATURE SERVER supports qualified signatures and seals. Qualified signatures and seals signify the highest level of trust and legal significance, and are legally accepted throughout the EU in accordance with the eIDAS Regulation.

### SIGNING FLOWS

The web interface of the primesign SIGNATURE SERVER allows for automatic implementation of signing flows, for example, with colleagues, customers, or partners. Share documents via email or invite one or more parties to sign a document, either consecutively or in parallel. Or create and use templates for signing flows.

### BATCH SIGNATURE CAPABILITY

With the primesign SIGNATURE SERVER, multiple signatures to be applied to a batch of documents only need to be triggered once. Batch signature processing is possible regardless of whether primesign MOBILE or other selected eIDAS identities (e.g. Austrian mobile phone signature/ID Austria) are used for signing.

### PRODUCT VARIATIONS

- + Virtual appliance
- + Hardware appliance
- + Managed Service (SaaS)

### FEATURES

- + Signing in a web browser
- + No local client-software required
- + Visible signature signets
- + Place your signature signet via drag & drop or using placeholders
- + PAdES signatures, LTV-compliant (SCD dependant)
- + Document (Office to PDF) conversion supported
- + PDF editing supported
- + Templates for signing flows
- + Batch signature capability & mass signing processes
- + Supports various signature creation devices (also from external trust centers), such as smart cards, remote signatures, server-side signatures, HSM
- + Supports primesign trust center services, such as primesign MOBILE and primesign WRAPTOR
- + External database supported
- + SOAP web services
- + Directory Scanner
